

WithHear

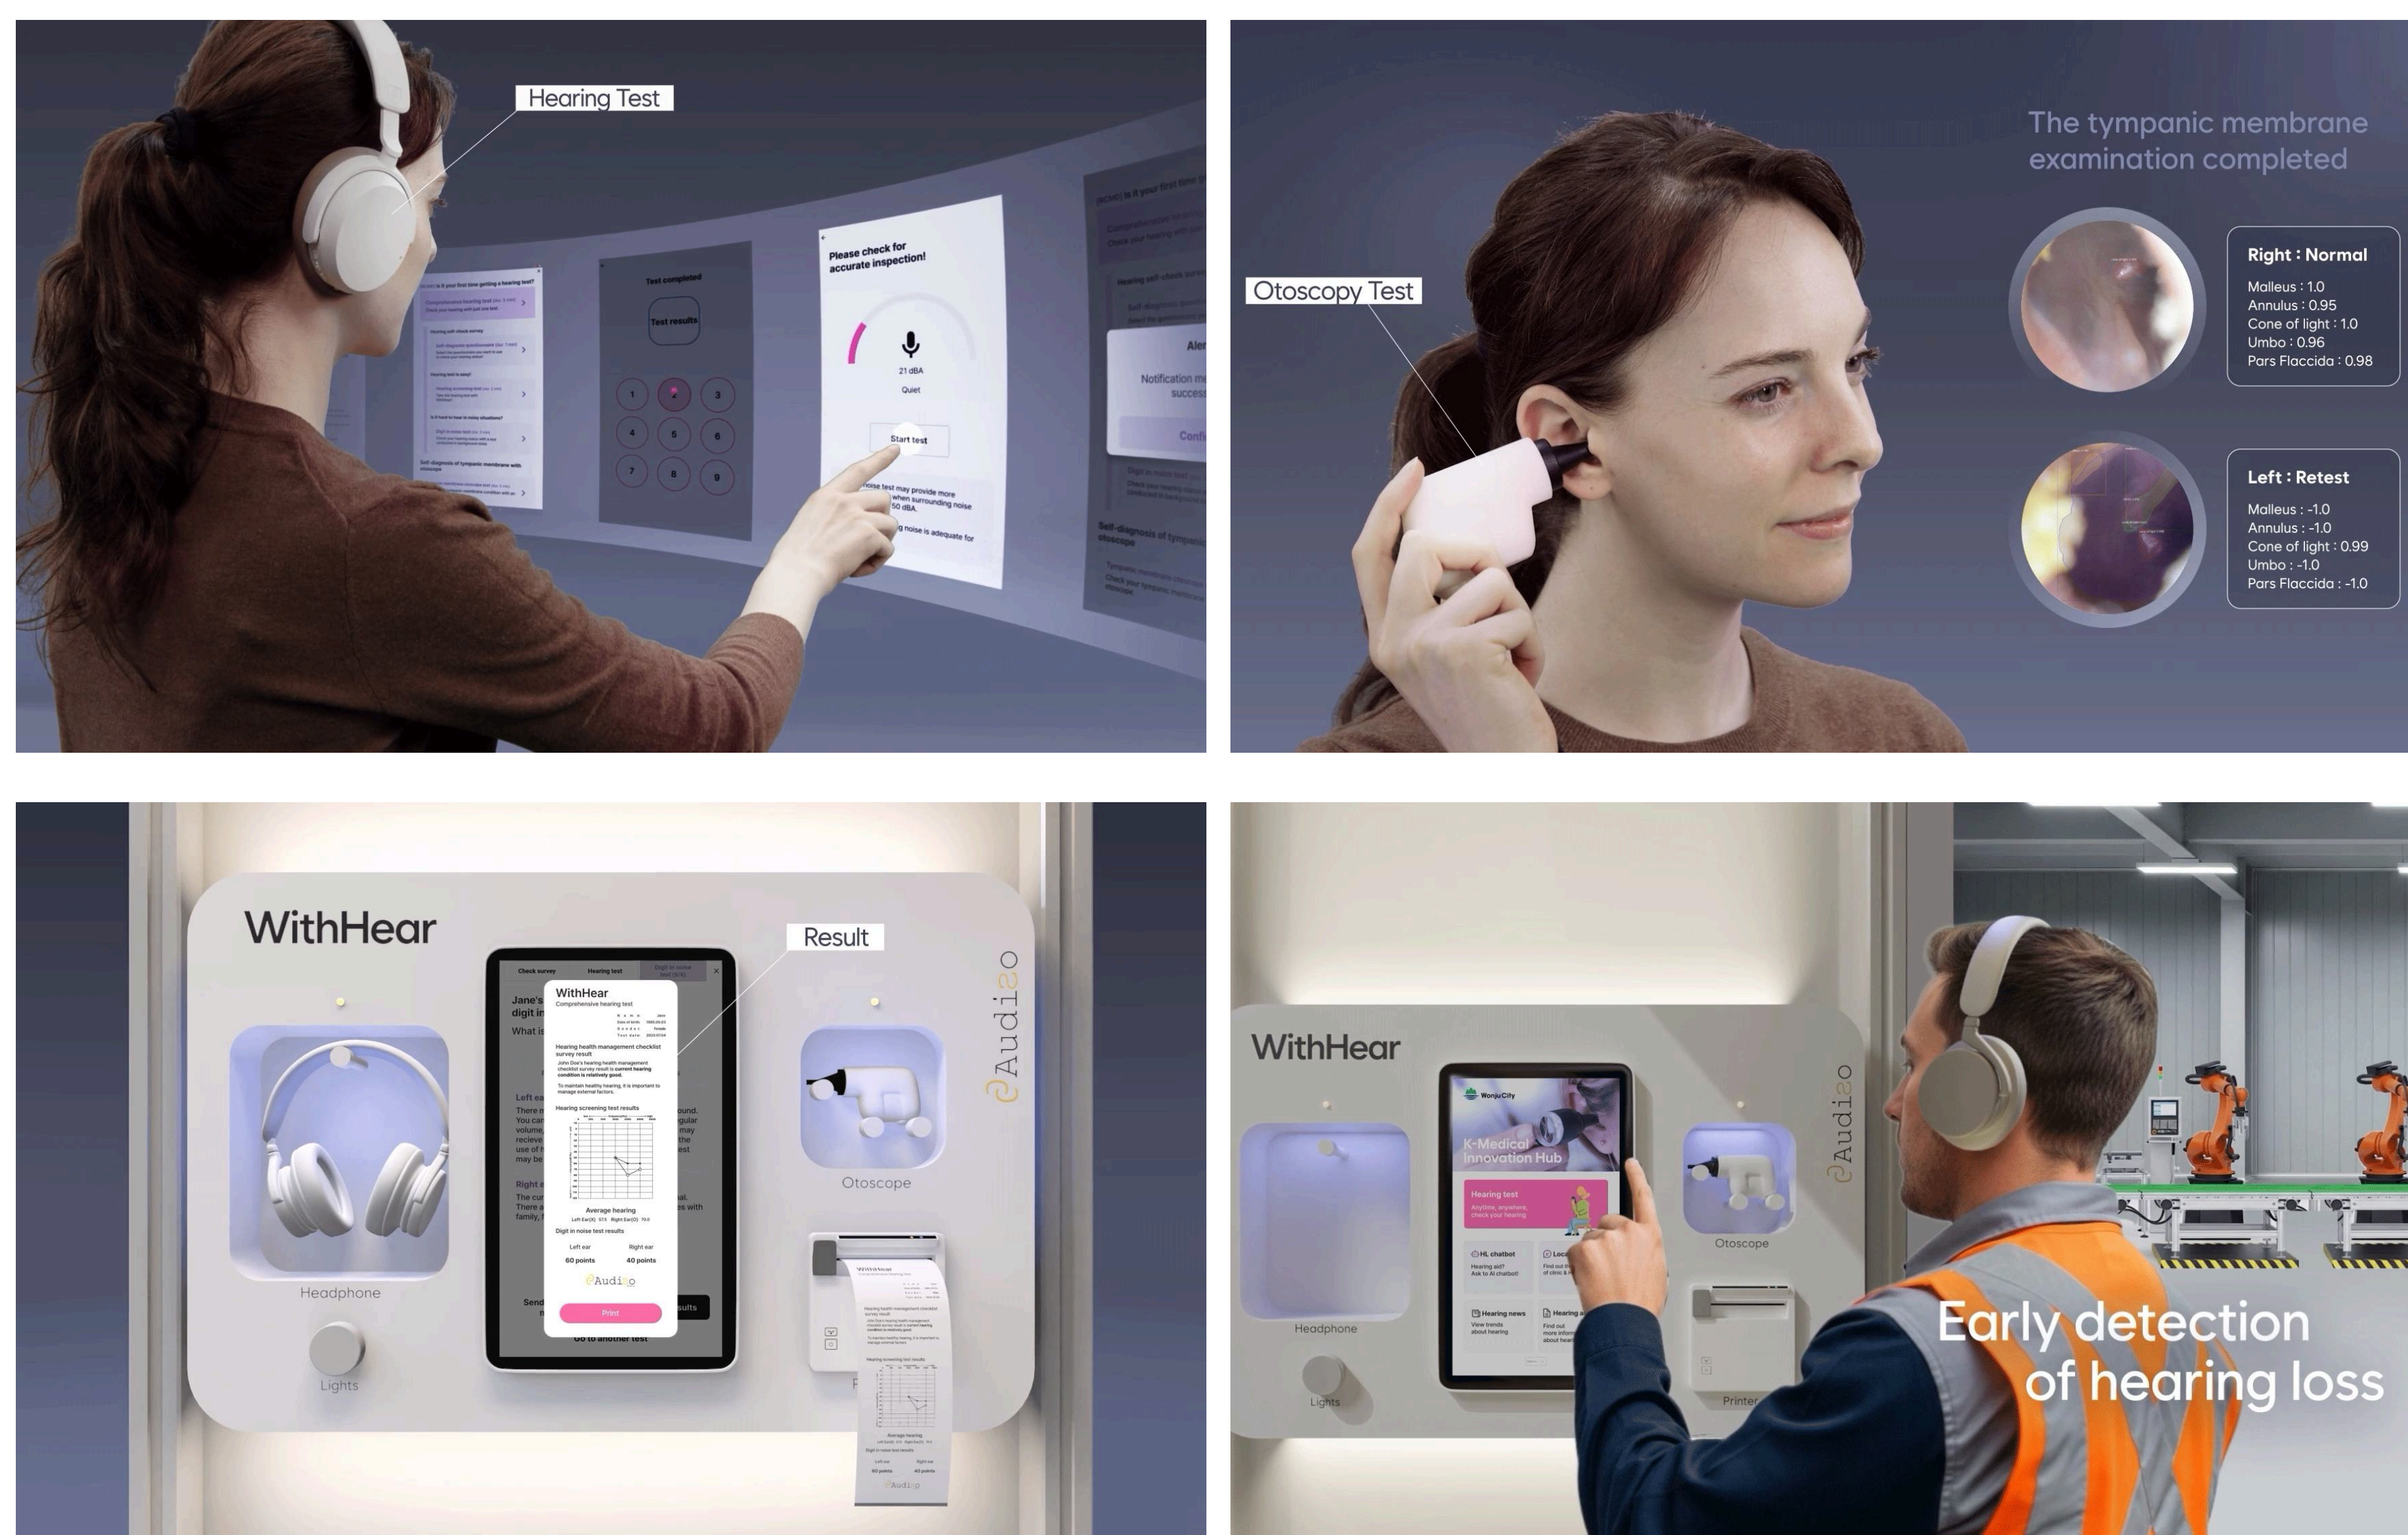

Innovative hearing test solution

WithHear core features

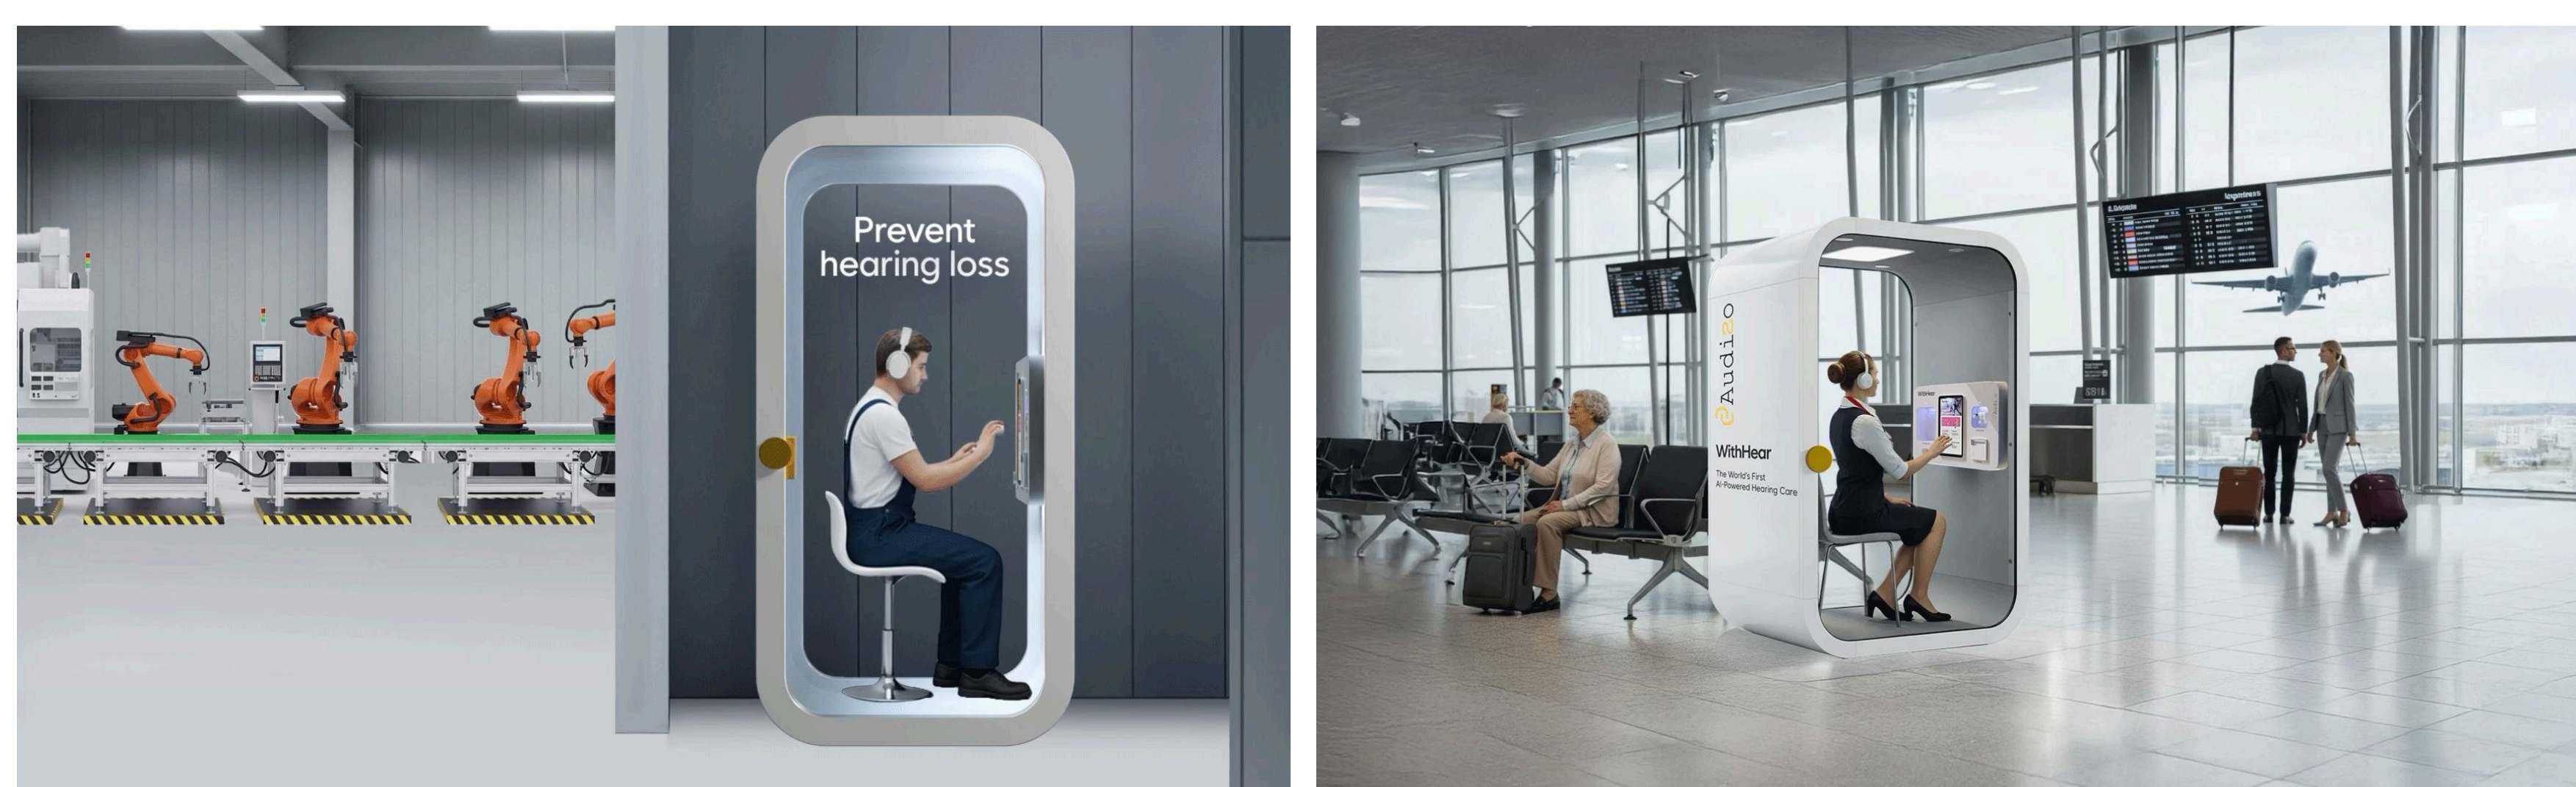

WithHear is an AI-based hearing screening system that helps detect hearing loss early, without the need for professional assistance.

WithHear features eardrum imaging and AI analysis, enabling rapid and accurate self-diagnosis of hearing loss without the need for professional assistance.

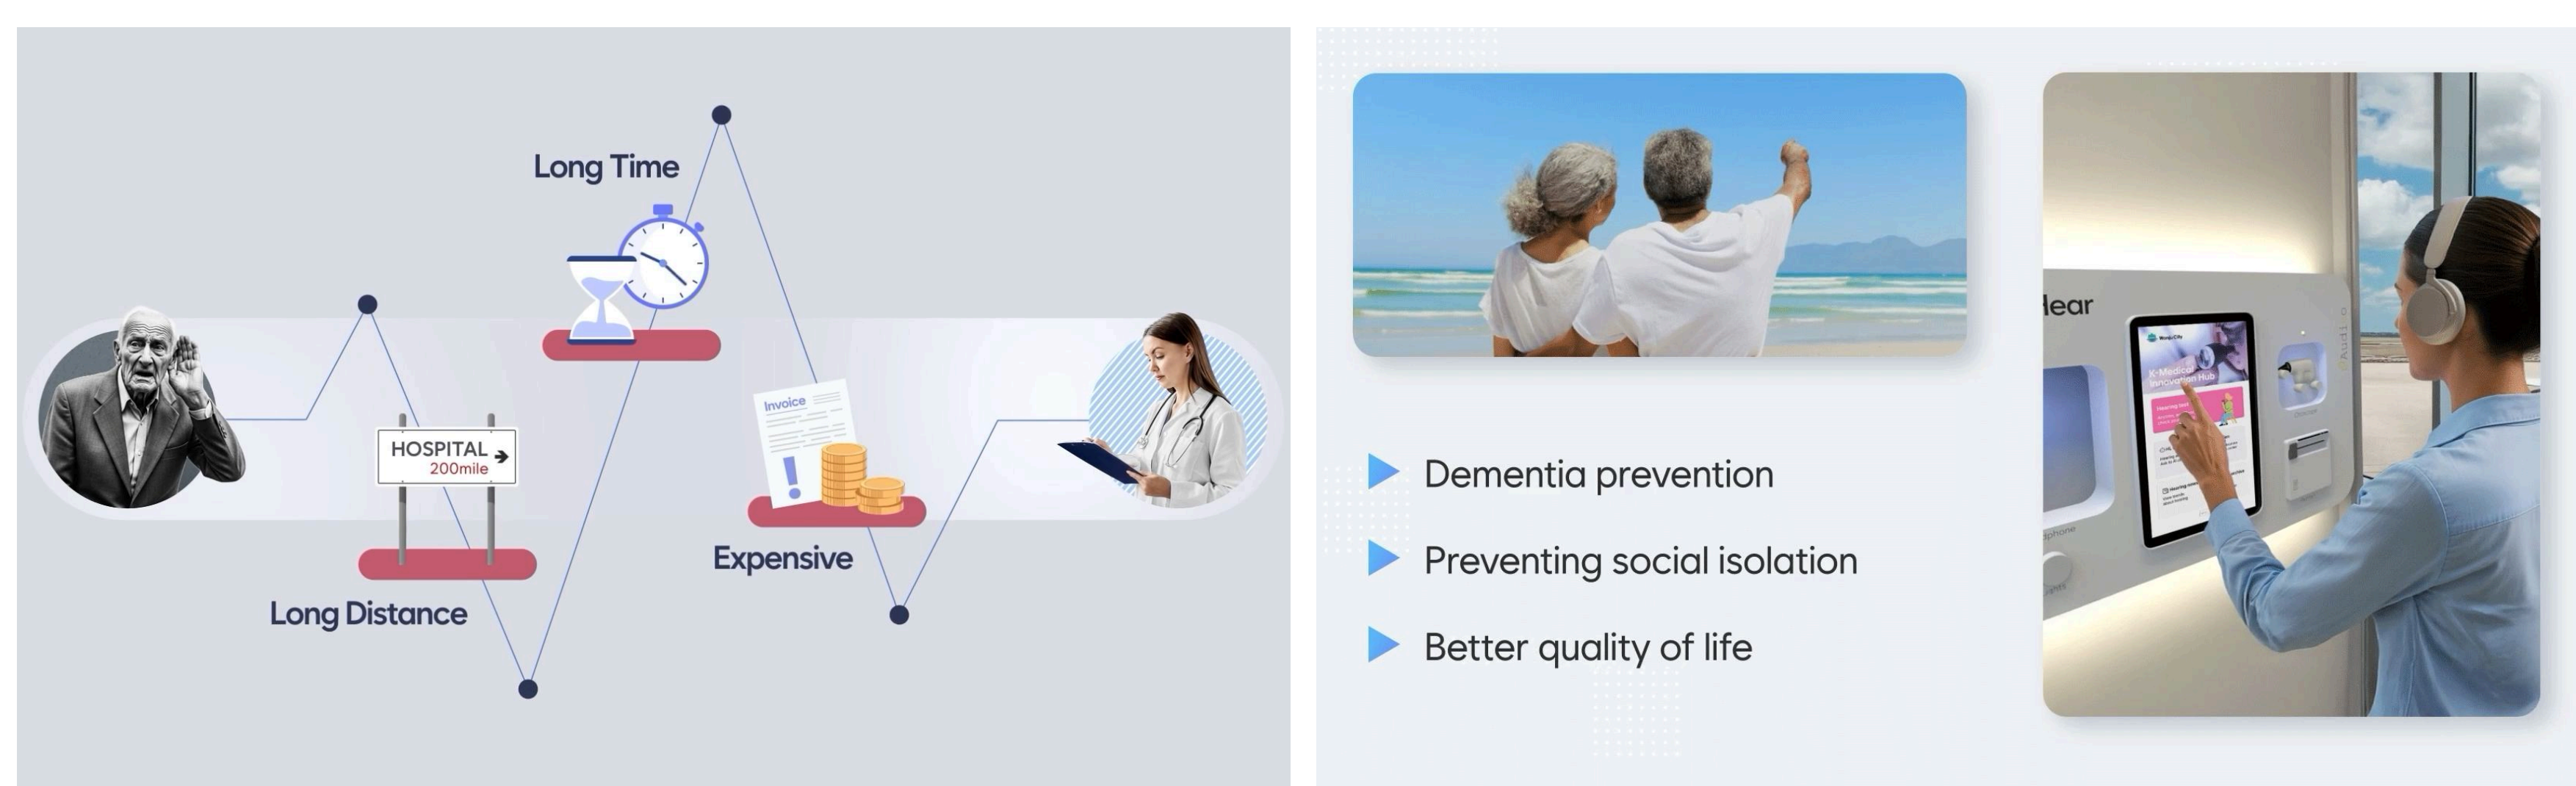

WithHear installation

By installing WithHear in medically underserved areas or high-traffic areas, it can increase accessibility and enable preemptive diagnosis of potential hearing loss patients, overcoming the limitations of existing hearing testing methods.

WithHear Social Significance

WithHear introduces a new model of “hearing screening without medical staff,” driving a paradigm shift in hearing care. By combining AI-based analysis with internationally standardized calibration procedures, it achieves hospital-level diagnostic reliability while remaining accessible in public and everyday settings. This enables preventive, early-stage hearing diagnostics and expands access to underserved communities and the elderly, offering meaningful contributions to public health.
